

# GCCF REGISTRATION POLICY FOR OCICAT CLASSIC CATS

Agreed/effective February 2009

Breeds Permitted in Ocicat Classic Pedigrees

A. Ocicat Classics

B: Ocicats: breeds 73, 73a, 73b, 73c, 73k, 73r, 73s, 73as, 73bs, 73cs, 73ks, 73rs.

C: Ocicats and Ocicat Classics of unrecognised colours or patterns, which are bred from two Ocicat or Ocicat Classic parents, or from an Ocicat Classic or Ocicat x Ocicat Classic or Ocicat F2 variant. These are self cats, smoke cats, cats with a ticked tabby pattern, and cats with the Siamese restriction of coat colour/pattern (Blue-Eyed Ivory) or the Burmese/Tonkinese restriction of coat colour/pattern (AOC-Eyed Ivory).

D: Abyssinians of breeds 23, 23a, 23b, 23c, 23d, 23e, 23s, 23as, 23bs, 23cs, 23ds, 23es only. NB: sex-linked colours are excluded.

Any Abyssinians used for outcrossing must have tested normal for Pyruvate Kinase (PK) deficiency, or be deemed normal due to testing of cats on every pedigree line in previous generations. Pedigree line in this case refers to both parents, or four grandparents, eight great-grandparents, sixteen great-great-grandparents and so on, or any combination of the same which is inclusive of both the sire's and dam's ancestors.

## FULL REGISTER

Ocicat Classics with Full or Provisional recognition which have in their pedigrees within the preceding four generations only Ocicat Classics or Ocicats (as listed in A and B above) shall be registered on the Full Register, with the exception of those cats whose pedigrees include within three generations a cat with Preliminary recognition.

## SUPPLEMENTARY REGISTER

Ocicat Classics shall have their registration certificate overstamped "carries the Classic pattern gene". The registration certificates of subsequent spotted offspring (Ocicats) to be overstamped "may carry the Classic pattern gene", until cleared by test matings.

Ocicat Classics with a parent which is registered as Ocicat (self or smoke) shall have their registration certificate overstamped "carries the non-agouti gene". The registration certificates of subsequent spotted offspring of such cats to be overstamped "may carry the non-agouti gene", until cleared by test matings, or by genetic test\*

Ocicat Classics with a parent which is registered as Ocicat (Blue-Eyed Ivory) shall have their registration certificate overstamped "carries the Siamese gene". The registration certificates of subsequent full coloured spotted offspring of such cats to be overstamped "may carry the Siamese gene", until cleared by test matings, or by genetic test\*

Ocicat Classics with a parent which is registered as Ocicat (AOC-Eyed Ivory) shall have their registration certificate overstamped "carries the Burmese gene". The registration certificates of subsequent full coloured spotted offspring of such cats to be overstamped "may carry the Burmese gene", until cleared by test matings, or by genetic test\*

## EXPERIMENTAL REGISTER

Ocicat Classics with Preliminary recognition which have in their pedigrees within the preceding five generations only Ocicat Classics or Ocicats as listed in A, B and C above), Ocicat Classic or Ocicat Variants or Abyssinians (as listed in C above and deemed normal for PK deficiency) shall be registered on the Experimental Register.

## REFERENCE REGISTER I

Ocicat Classic Variants

The progeny of an Ocicat Classic x Abyssinian mating {deemed normal for PK deficiency and excluding sex-linked colours}, shall be registered on the Reference Register as an Ocicat Classic Variant (F1).

The Classic patterned progeny of an Ocicat Classic Variant (F1) x Ocicat Classic or Ocicat mating shall be registered on the appropriate Register as an Ocicat Classic. When registering such a cat, the breeder shall supply a copy of the pedigree and request that the cat be registered on the Supplementary, Experimental or Reference Register as appropriate.

The non patterned progeny of an Ocicat Classic Variant (F1) x Ocicat Classic or Ocicat mating shall be registered on the Reference Register as an Ocicat Classic Variant (F2)

The Classic patterned progeny of an Ocicat Classic Variant (F2) x Ocicat Classic or Ocicat mating shall be registered on the appropriate Register as an Ocicat Classic. When registering such a cat, the breeder shall supply a copy of the pedigree and request that the cat be registered on the Supplementary, Experimental or Reference Register as appropriate.

## **REFERENCE REGISTER 2**

Ocicat Classics of unrecognised colours

Ocicat Classics of colours which do not yet have Preliminary recognition but which have in their pedigrees within the preceding five generations only Ocicat Classics, Ocicat Classic Variants, Ocicats, Ocicat Variants or Abyssinians (deemed normal for PK deficiency) shall be registered on the Reference Register, but shall be eligible to be considered as registered on the Experimental Register in the event of Preliminary recognition of their breed.

## **REFERENCE REGISTER 3**

All progeny of Variant x Variant matings will be registered on the Reference Register as 'no recognised breed' with no progression.

Cats of Ocicat Classic appearance produced from matings to other recognised breeds whose Registration Policies permit Ocicat Classics as an outcross breed shall be registered as directed by the Registration Policy for the other breed, but with no reference to Ocicat Classic type, and shall not be permitted in the pedigrees of Ocicat Classics.

All other cats of Ocicat Classic appearance which in their pedigrees within the preceding five generations have any breeds other than Ocicat Classics, Ocicats or Abyssinians shall be registered on the Reference Register as 'no recognised breed' with no progression.

\* Breeders wishing to prove their cats clear of carrying recessive colour/pattern genes, must present for testing only cats uniquely identifiable by microchip or tattoo, the number of which must be noted on the cat's own veterinary records. This number must be submitted to the laboratory performing the test, and to GCCF when requesting register, transfer or removal of over stamping.
