

My thanks to Julie and Sue for the very kind invitation to this lovely breed show just 15 minutes from home! Thank you to Shelley for stewarding today. My Best Adult was the gorgeous Ch Alhaberry Higgledy Piggledy who went on to be Best Overall British in the RCT. I then chose a mature black tipped whose really come into his own now called Gr Ch Jeraz Snowbear, as my Overall British in the Chinchilla, Silver Tabby & Smoke Show, along with my Best Neuter choice being the beautiful IGRCH & GR PR Owletts Jim Jam who went on to win Best Overall Persian and Overall Best In Show at the Chinchilla show. Many congratulations to all!

RCT

AC SELKIRK REX FEMALE NON-SELF CHAMPION ADULT

GR CC RYAN'S CH ARKTOS BRENNNA (SRS F) Black Tortie aged 5 ½ years old who was a wee bit overawed when out of her pen and looked much better when returned. She has quite a broad head with reasonable width across the cheeks, enough to be broader than the depth of head; Good width across the top of head between just over medium sized ears, nice and wide at base. Large round eyes set wide apart and short, downward slanting nose. Profile shows a rounded brow, slight rise to the nose, chin is a tad shallow for balance. Quite good weight and feel about her solid rectangular body, reasonable bone to the legs that end in rounded paws. Lovely tail! She wears a soft dense coat that is well waved especially on the legs and tail and is a uniform length, stands away quite nicely.

TORTOISEHELL KITTEN

How lovely to have 3 torties! Thank you!

1<sup>ST</sup> & BOB LOVESY'S PERSILUS MISAKI (PER f) 5mths 1 week old well developed and promising young lady who was very confident during judging, purring all the time. She shows super balance overall with a lovely broad, well-rounded head with very good width across a smooth top between small very well-furnished ears. Nicely rounded too in profile and shows a good depth of head with width developing nicely at the muzzle and very good width at the cheeks. Good overall balance to her head for her age. Lovely softly expressive bold round eyes of a good size and a promising deep muddy brown, nice width to the stop, wide open nostrils & well-formed leather. She's teething at the moment, bite is level, chin could just show a wee bit more depth in profile. She has a lovely firm weighty feel about her, good size for her age too, good cobby body in balance with her head, solid and showing good breadth to the chest. She stands low on strong very well-boned legs and has firm round paws with super tufts. Tail short and bushy, just a tiny bit of shady hairs in the black. Typical kitten coat for her age, developing length very well and shows very good density with fine hairs that are soft to touch, not yet silky with some length developing around her chest and between the legs. She has gorgeous rich tones of reds that are mostly evenly toned, not too many varying shades, so this stands out for me, patched with a good dense black and both colours are virtually sound to the roots. She has a mix of reds and black on her face, clearly defined patches of red and black on the body, both colours on legs down to the front right is almost solid but there is a hint of mingling coming through, both colours showing well on the tail. I loved her long whiskers too! She was beautifully prepared for the show which must be a trifle hard to maintain as she's a playful miss! She went on to win Best Persian Kitten, many congratulations indeed.

2<sup>nd</sup> WAINFUR'S SUGARTRUMP SPICE OF LIFE (PER f) 7mths 6 weeks old very well-developed big kitten who tried very hard with her big purr to stop me from concentrating! She has a super domed

top of head both face on and in profile with very good width between her small ears showing good long ear furnishings, good width at the cheeks. Quite good width to muzzle, chin is just under medium depth, so balance just needing to develop more. Lovely large bold rounded eyes of a good muddy deep orangey brown developing, lovely soft expression with a bit of cheekiness thrown in, set wide apart a snub nose with good wide nostrils. Slightly undershot bite. She's a very nice size and weight and her cobby body feels solid and firm and well developed with good breadth at the chest, stands fairly low on quite well boned strong legs ending in large round very well tufted paws. Lovely length and density to her silky coat and very well groomed indeed. Super frill between the legs, quite good fullness to the tail. She is a mix of a few patches and soft mingling on the body of mostly sound black, she does have some shading on her back and underparts, I'd say is commensurate with age, towards the back and on her tail. The colours are mixed well but not quite as vibrant as the winner; varying shades of a red, some lighter and some a good deeper red, both showing good colour down the hair shafts to roots. She has both colours on the face just slightly more black with some lighter red mingling and she shows mingled colours to the tail and down her legs. A very attractive young miss who I look forward to seeing as she transitions.

3<sup>rd</sup>. SOLOMAN'S SONERI FREYA (PER f) 3mths old the baby of the class and she too has a super temperament and didn't mind the close inspection one bit bless her! She has a fairly round head with quite good width across her almost smooth top, fairly small ears just a little wide at base showing good internal furnishings, the muzzle is very strong and her chin is deep, I'd like a little more rounding to the forehead and width at the cheeks, for balance and hope this develops as she grows. Pleasing expressive light brown bold eyes, very faint green tinge around the pupil at the moment. Wide break to the short nose with quite wide leather and open nostrils. She has a rather undershot bite with one side of the upper and lower canines missing so she is tongue tipping at the moment and the jaw can appear slightly off balance so I hope it all settles as she grows. She got a cobby little body of quite good weight and substance standing low on reasonably well-boned legs ending in rounded slightly tufted paws. Short tail with short fur, length of fur yet to develop. Baby coat with shorter coat on her shoulders, quite nice density coming through, some long guard hairs and was well prepared. She has light red patches that are a deeper red at the base of the coat coming through, she is quite shady on the body of black areas but again, it is more of a jet black at the base so once her coat comes through more it would be good to see how the depth and tone of both colours have developed as I felt looking at the undercoat they were quite promising. She has both colours on her face with a slight predominance of black to the shades of red, mingling to the longer fur on her body of both colours and a little of both colours on legs and tail. All 4 paws show both colours.

#### CHINCHILLA, SILVER TABBY & SMOKE CAT SOCIETY

#### BLUE/BLUE-CREAM/LILAC/LILAC-CREAM/CREAM SHADED CAMEO KITTEN

1<sup>ST</sup> (BOB NOT AWARDED) BUNDOCK'S REMILAKAT BLACK CHERI (PER fs 11) 6mths 2 weeks. This kitten was entered in the dominant class but then moved to the Dilute class by the Show Management. Hence the change in class title. She has a sweet face good dome to the top of head, very slight bump above the brow I hope smooths out as the head grows. Quite good width at the cheeks, good strength to the wide muzzle. Her ears are fairly small but slightly pointed at the tips and set a little high on her head and she needs to grow into them for balance, long silver ear tufts. Quite good size to her bold light muddy toned eyes, set fairly wide apart, short straight nose, wide break, acceptable width to nostrils. Slightly undershot bite and firm deep chin. Cobby little body of

acceptable weight, slightly tall in the leg which are of quite good boning, paws showing tufts and are all blue. Short tail with some coat fullness to develop, I couldn't see any cream hairs today. Her coat was really needing preparation as it was rather knotty, its quite dense and uneven darkish blue heavy uneven shading and I could just make out one very small area of what looked like cream shading at the top of the fur on one side of her body and she was rather stained below her eyes too I'm afraid. When you part the coat the base is really light silvery white, not an ash white that I'd expect to see if she was a black tortie and there is a really excellent contrast to what is very heavy uneven shading that is mostly half way and in parts further than halfway, down the hair shaft. She does have a noticeable "mask" of medium blue on silver, on her face and the blue is quite intense on her legs, more than I expected to see as a shaded as I'd expect to see lighter shading on the face and legs. I'm sorry to not award the Best of Breed, she was at least changed classes otherwise I would have had to wrong class or wrong colour her. Good luck with her in the future, she handled really well under the scrutiny.

AC TIPPED / SHADED/ SMOKE/ PEWTER/CAMEO EXOTIC SHADED NEUTER

CONSIDERED FOR AND BOB AWARDED TO: CHALKLEY'S IGRCH & GR PR OWLETT'S JIM JAM (EXO ds 11) Gorgeous Persian type, excellent head breadth and fullness of cheek, strong well built cobby sturdy body with thick well boned legs supporting. Gorgeous orange eyes, wonderful soft expression! Super light red shading on a bright silver undercoat, beautifully even silver and good contrast. Wonderful density and texture to his coat.

BLACK SILVER TABBY ADULT

CONSIDERED FOR AN BOB AWARDED TO: PANTING'S CH BERTIE OF BOCCACCIO (BSH ns 22) M 1YR 4MTHS Super British type and conformation with a lovely broad rounded head shape showing excellent width across the top of head between well placed ears of medium size with nice rounded tips. Good width to cheeks and reasonable width to muzzle. Super light green eyes set well apart a short broad nose, pink leather outlined in black, just a wee bit of tarnishing, untidy but perfectly acceptable bite, sore gums today, firm chin. Deep chest and flanks to his strong cobby body of excellent weight and balance to head, muscular and firm ably supported by short strong legs and large rounded paws. Excellent British coat, short dense and crisp! Super density to the black pattern on a really nice even light silver ground affording excellent contrast. Clearly defined face pencilling and M with lines over head to a good butterfly with slightly vague wings, 3 tramlines, just slight brindling either side of the centre line side lines. Good oysters, one surrounded by an incomplete ring, broad rings to tail ending in a black tip.

BLACK SILVER SPOTTED KITTEN

1<sup>ST</sup> & BOB COPE'S SILVERCATZ SILVER ANGEL WINGS (BSH NS 24) 7mth old and very well grown. Good breadth to head and cheeks, just very slightly tapering at the muzzle, good width between medium ears with black tips, just slightly wide at the base for balance. Large light green eyes nicely rounded set wide apart a short nose but shows fawning I hope disappears. Nice brick leather. Level bite and chin. Cobby body, a fraction tall in the leg, showing good bone, slightly out of balance with her head in that it needs to catch up size wise. Pleasing short dense coat slightly soft textured with a blackish /grey pattern linked on the sides, better depth of black to the facial tracings and lines over head spine-line showing enough separation to the spots, some sweet spots to her paws but

incomplete rings around the tail She has a rather a creamy band of colour in the silver which is slightly brindled in places, thus resulting in a reasonable contrast to the pattern so I do hope this clears with her adult coat to give her a better contrast. Very sweet nature and handled really well.

#### BLACK SILVER TABBY NEUTER

CONSIDERED FOR AND BOB AWARDED TO: BRASSINGTON'S UK & IGPR TIGATAILS DONALD (BSH ns 22) 4 years 7 mths old bid whopper of a cat! I'd have like more rounding to his head shape, but he does have a lovely expression to his green eyes and his coat is nice and dense. Good contrast from the clean silver to the classic pattern. Slight brindling in the line either side of the spine line.

End of report.

Sue Dalton-Hobbs
