TABBY or TORTIE TABBY POINT BIRMAN KITTEN FEMALE.

1. BOB. HOPE'S REDSKY MARTHA MUFFIN. SB1 h 21. F. 19.7.14.

This girl of just 8 months, showing good Birman type, was quite a challenge! She was entered as a Chocolate Tortie Tabby, but an initial glance she might just appear as a Lilac Tortie Tabby. However, as I was not quite sure, I assessed her as a Chocolate Tortie Tabby, and I hope this becomes clear as we progress. She has a broad head with gentle contours; medium size ears with good space between; cheeks tapering to a good muzzle; firm chin, level bite; medium length nose with slight dip in profile; round eyes of a good shade of blue. Good weight to her young body; well boned medium length legs; strong firm paws. Coat is long, full, and silky. I feel it could be ivory or magnolia! Her points are now the area of doubt. Her ears are mingled with colour and clear thumbprints. At the base of her ears, the colour is not simply a dull red, it has quite a glow to it, and this could indicate chocolate. Her mask is diamond in shape, and presents the real challenge. The top of her nose, near the forehead, appears to be a dark toned lilac. At the tip of her nose, near the nose leather, colour appears to be more chocolate than lilac. She has spectacles around the eyes; a faint 'M' on her forehead is of creamy-red; spots on her whiskerpads; her legs have not yet fully developed colour except at the base of her legs where there could be a warm toned cream colour mingled with a darker toned lilac or chocolate? Her tail is well mingled with colour, being red, cream, and a tinge of chocolate rather than lilac. She has white gloves; white socks; gauntlets to below the hock. I did speak to her owner as I did feel her lovely girl did need more time to develop her colours. However, maybe it may come down to a genetic test. In view of all this I decided to give her the benefit of the doubt and awarder her 1. & BOB. She has such lovely Birman type, and was shown in such good condition.
